

SR No. 1-655105841. In addition to the above we need following clarification for the following. 1. We would like to use tlk3132 in TBI mode where in serial data will be in SGMII mode and these needs to be convert to TBI and another side we are planning to use another TLK3132 to convert the given TBI to SGMII. In this conversion we expect all the packet transfer will take care of all the information like /C/ and /I/ and auto negotiation related information to be transferred through this conversion. In this regard kindly confirm all code group and ordered set definition as defined in clause 36 of the IEEE 802.3z standards are completely transparent through TLK3132 in TBI mode. kindly do the needful. Thanks
