Development Tools – For ARM® or DSP software development, TI offers the Eclipse-based Code Composer Studio™ IDE v5 (CCStudio), including GDB and GCC support for ARM. For ARM RTOS applications, developers can use the appropriate third-party IDE or CCStudio for select RTOS solutions. The TI compiler generates optimized code for advanced performance on the DSP in C or C++, allowing developers a higher level of abstraction without compromising system optimization. CCStudio simulators also offer profiling, cache-tuning and real-time debugging on the DSP. JTAG emulators with a variety of PC interfaces, speeds, and prices are available from TI and through TI's Design Network.

Kits & Evaluation Modules (EVMs)

Kits & Evaluation Modules (EVMs) – Immediately start evaluating and developing your DaVinci-based solutions with the right kit for your needs.

Featured kits include:

- TMDXEVM8148 - \$2249 DM814x/AM387x Evaluation Module (EVM)
- TMDXEVM368 - \$1365 TMS320DM36x Evaluation Module (EVM)
- TMDSEVM3730 - \$1495- AM/DM37x Evaluation Module (EVM)
