## 1. Application

This specification applies to a color TFT-LCD Module, LM156LF1L02.

## 2. Overview

This module is a color active matrix LCD module incorporating Oxide TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, a control circuit and power supply circuit. Graphics and texts can be displayed on a 1920×3×1080 dots panel with 262144 colors by using eDP (Embedded Display Port) Ver1.2 interface and supplying +3.3V DC supply voltage for TFT-LCD panel driving.

In this TFT-LCD panel, color filters for excellent color performance is incorporated to realize brighter and clearer pictures, making this Module optimum for use in multi-media applications.

Optimum viewings are in all directions.

9serial-4parallel LED structure.

Backlight-driving LED controller is built in this Module.

eDP transfer rate specification: 2.7Gbps/2 lane.

[Note 5-2-3] As for the power off sequence for VDD (t11), be sure to keep above mentioned timing. If the VDD power off sequence timing is other than shown above, LCD may cause permanent damage. As for the power sequence for backlight, it is recommended to apply above mentioned input timing. If the backlight is light on and off at a timing other than shown above displaying image maybe get disturbed.

### VDD-dip-conditions

- 1)  $2.5\text{ V} \leq \text{VDD} < 3.0\text{ V}$   
 $t_d \leq 10\text{ ms}$

Under above condition, the display image should return to Anappropriate figure after VDD voltage recovers.

- 2)  $\text{VDD} < 2.5\text{ V}$   
 VDD-dip conditions should also follow the ON-OFF conditions for supply voltage.

[Note 5-2-2]

Typical current condition: 16-gray-bar pattern.  
 VDD=+3.3V

Maximum current condition: Vertical stripe pattern.  
 VDD=+3.3V

### 5-3. Backlight driving

The backlight system is an edge-lighting type with white-LED.

(It is usually required to measure under the following condition:  $T_a = 25^\circ\text{C} \pm 2^\circ\text{C}$ )

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remark
Supply voltage	$V_{BL}$	7.0	12.0	21.0	V

[Note5-3-1]  $V_{PWM}$  Input : 100%= Max luminance 1%= Min luminance

[Note5-3-2] The minimum value of the dimming signal pulse width is assumed regulations of the width of high and the width of low.

[Note5-3-3]  $V_{CNT}$  Input : High = BL turn on, Low or OPEN =BL turn off

**VBL-dip conditions**

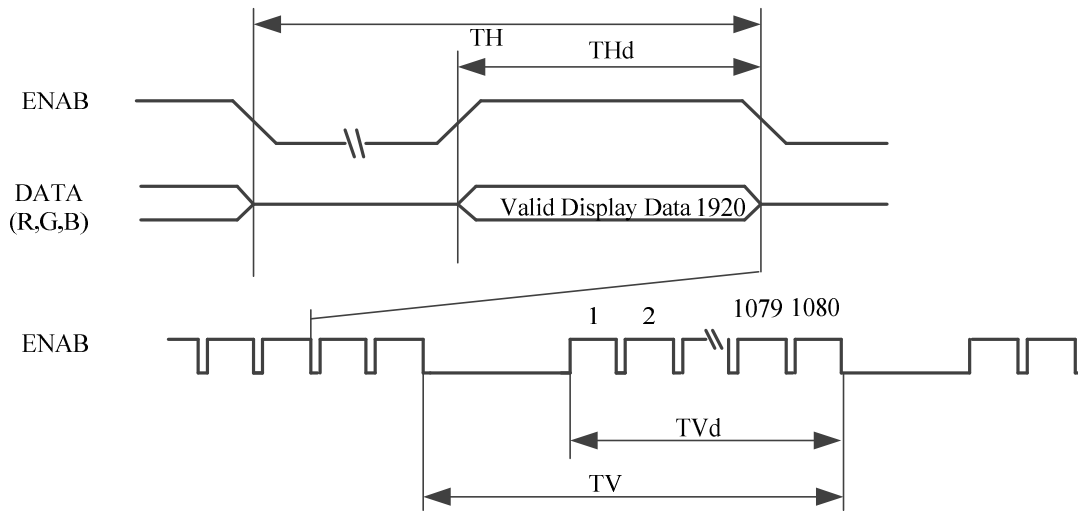

- 1)  $V_{th} \cong V_{BL} < V_{min} : t_d \cong 20ms$
- 2)  $V_{BL} < V_{th}$  : The condition of instantaneous voltage drop is apply to input voltage sequences

Each basic color can be displayed in 64 gray scales from 6 bit data signals.  
 According to the combination of 18 bit data signals, the 262144color display can be achieved on the screen.

※The measurement shall be taken 30 minutes after lighting the Open-cell at the following rating.

※Condition: PWM Duty = 100%

※The optical characteristics shall be measured in a dark room or equivalent.

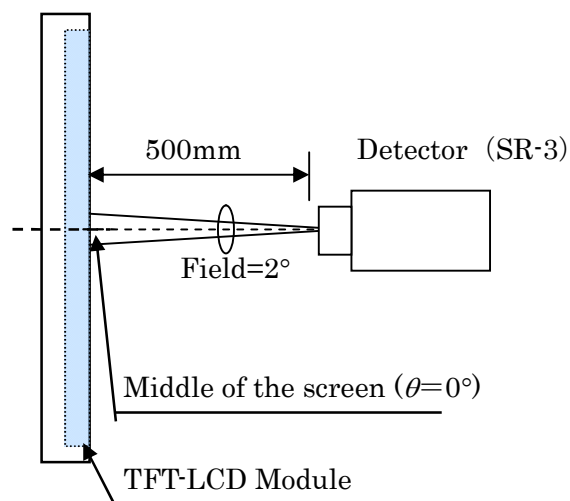

Fig.9-2 Measurement of Contrast, Luminance, Chromaticity, White variation, Crosstalk AndColor temperature variation.

[Note 9-3]Definitions of viewing angle range:

Fig.9-3 Viewing angle

[Note 9-4]Definition of contrast ratio:

The contrast ratio is defined as the following.

$$\text{Contrast Ratio} = \frac{\text{Luminance(Brightness) with all pixels white}}{\text{Luminance(Brightness) with all pixels Black}}$$

[Note 9-5]Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white" .

Fig.9-4 Response time

[Note 9-6] This shall be measured at center of the screen.

[Note 9-7] The Luminance of White is the average of 5 measurements(4,5,7,9,10) showing in the Fig.9-5.

[Note 9-8]Definition of white uniformity:

White uniformity of 5 points is defined as the following with 5 measurements(4,5,7,9,10).

$$\delta_{W1} = \frac{\text{Maximum Luminance of 5 Points(Brightness)}}{\text{Minimum Luminance of 5 Points(Brightness)}}$$

White uniformity of 13 points is defined as the following with 13 measurements(1~13).

$$\delta_{W2} = \frac{\text{Maximum Luminance of 13 Points(Brightness)}}{\text{Minimum Luminance of 13 Points(Brightness)}}$$

## 10 Display Quality

The display quality of the color TFT-LCD Module shall be in compliance with the Incoming Inspection Standard.

## 11 Handling Precautions

- a) Be sure to turn off the power supply when inserting or disconnecting the cable.  
Please insert for too much stress not to join a connector in the case of insertion of a connector.
- b) Be sure to design the cabinet so that the Module can be installed without any extra stress such as warp or twist.
- c) Since the front polarizer is easily damaged, pay attention not to scratch it.
- d) Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
- e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.
- g) Since CMOS LSI is used in this Module, take care of static electricity and injure the human earth when handling. Observe all other precautionary requirements in handling components.
- h) This Open-cell has its circuitry PCBs on the side and should be handled carefully in order not to be stressed.
- i) Laminate film is attached to the Module surface to prevent it from being scratched. Peel the laminate film off slowly just before the use with strict attention to electrostatic charges. Ionized air shall be blown over during the action. Blow off the 'dust' on the polarizer by using an ionized nitrogen gun, etc. Working under the following environments is desirable.
  - All workers wear conductive shoes, conductive clothes, conductive fingerstalls and grounding belts without fail.
  - Use Ionized blower for electrostatic removal, and peel of the laminate film with a constant speed. (Peeling of it at over 2 seconds)
- j) The polarizer surface on the panel is treated with Anti Glare . In case of attaching protective board over the LCD, be careful about the optical interface fringe etc. which degrades display quality.
- k) Do not expose the LCD Module to a direct sunlight, for a long period of time to protect the Module from the ultra violet ray.
- l) When handling LCD Modules and assembling them into cabinets, please be noted that long-term storage in the environment of oxidization or deoxidization gas and the use of such materials as reagent, solvent, adhesive, resin, etc. which generate these gasses, may cause corrosion and discoloration of the Modules.
- m) Liquid crystal contained in the panel may leak if the LCD is broken. Rinse it as soon as possible if it gets inside your eye or mouth by mistake.
- n) Disassembling the Module can cause permanent damage and should be strictly avoided.  
(Except for protection film of the panel.)
- o) Be careful when using it for long time with fixed pattern display as it may cause afterimage.  
(Please use a screen saver etc., in order to avoid an afterimage.)
- p) If a minute particle enters in the Module and adheres to an optical material, it may cause display non-uniformity issue, etc. Therefore, fine-pitch filters have to be installed to cooling and inhalation hole if you intend to install a fan.
- q) Epoxy resin (amine series curing agent), silicone adhesive material (dealcoholization series and oxime series), tray forming agent (azo compound) etc, in the cabinet or the packing materials may induce abnormal display with polarizer film deterioration regardless of contact or noncontact to polarizer film.  
Be sure to confirm the component of them.
- r) Do not use polychloroprene. If you use it, there is some possibility of generating Cl<sub>2</sub> gas that influences the reliability of the connection between LCD panel and driver IC.
- s) Do not put a laminate film on LCD Module, after peeling of the original one. If you put on it, it may cause discoloration or spots because of the occurrence of air gaps between the polarizer and the film.
- t) Ground module bezel to stabilize against EMI and external noise.

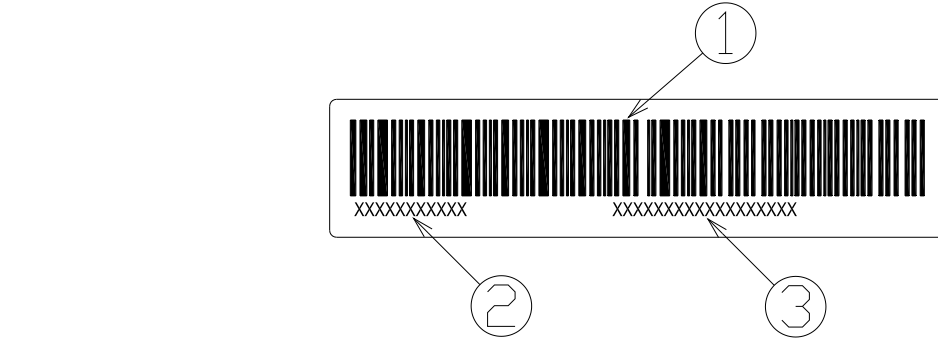

## 12 Packaging Condition

Refer to the appendix 1.

## 13 Label

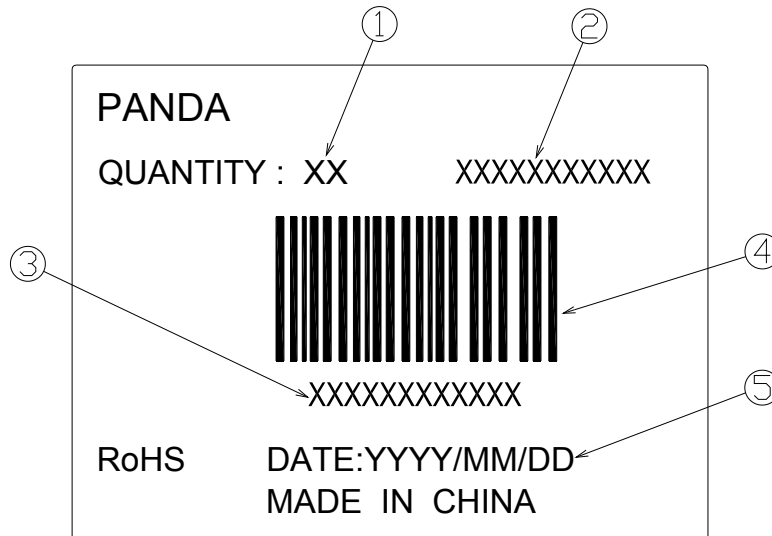

1) Open-cell Bar code label:

- ① Barcode (Serial number)
- ② Model No.
- ③ Serial number

2) Packing bar code label:

- ① Quantity(30pcs/Carton)
- ② Model No.
- ③ Serial number
- ④ Barcode (Serial number).
- ⑤ Date

## 14 RoHS Directive

This LCD Module is compliant with RoHS Directive.
