

#### [Background]

We would like to use the Eye Opening Monitor of DS125DF410SQE to evaluate the signal quality within our system. We understand that a USB2ANY fixture is necessary to graphically check the waveform using the above functionality.

#### [Questions]

Is the only software that needs to be installed on the operating PC SigCon Architect v2.0.0.8 shown in the right figure? Or are there any other software or files (profiles) required?  
(I asked this question because there are Additional resources on the download site besides the Zip file shown in the right figure, and I couldn't determine whether these downloads are necessary.)
