

## Overview:

We are working on our own application on module TPS65982EVM Development Kit rev. D as shown in Figure 1, and had some problems with it. In our setup I needed to load binary file into flash memory via I2C bus. As an external controller I used embedded system (Toradex Colibri VF61 module) with several I2C buses. We are using your utilities (python scripts) from Texas Instruments website on Linux Arch OS. We connected directly I2C lines from devkit to our module and it works fine. Writing and reading registers CMD1 and DATA1 works perfectly. I think that is not necessary to show the source code. The system is powered from external power supply 20V, which is connected to J4 connector.

### Problem description:

At the first I run read\_registers.py script. The partly result is shown in Figure 2. Everything looks great, but problem occurs when master sends 'ADCs' command to read ADC registers. TPS65982 responds '!CMD'. Why does not USB C controller recognize command described in Firmware User's Guide? What we done wrong? The results with enable I2C debug mode are shown in Figure 3.

```

*Figure 3: Reading ADC register*

Next I run `flash_update_region_0.py` with binary file and slave device address given as arguments. The result is the same as above. Every command that supports flash memory ('FLrr', 'FLem', 'FLad', 'FLwd') is unrecognizable. The response to 'FLrr' command is shown in Figure 4.

```

TPS65982 Debug Tool Version 2.0

[0]
I2C: Writing list to register 0x08:
[70, 76, 114, 114]
I2C: Device 0x38 returned the following from reg 0x08
[4, 33, 67, 77, 68]
I2C: Device 0x38 returned the following from reg 0x08
[4, 33, 67, 77, 68]
I2C: Device 0x38 returned the following from reg 0x08
[4, 33, 67, 77, 68]

```

*Figure 4: The response to 'FLrr' command*

At the end I would like to add, that loading binary file via I2C bus is necessary for our application and we can not use other interface. I hope that the problem was described understandable and clearly. If you have any questions or solutions, please let me know.
