

Captivate Design Center 1_60_00_00

Capsense Pad

Name: SensorPad

Configuration

Capacitive Mode: SELF

Element Count: 6

Electrode config: Cycles: 2, Controller Ports: 6, TX: 0, RX: 6

Configure Tx/Rx Groups

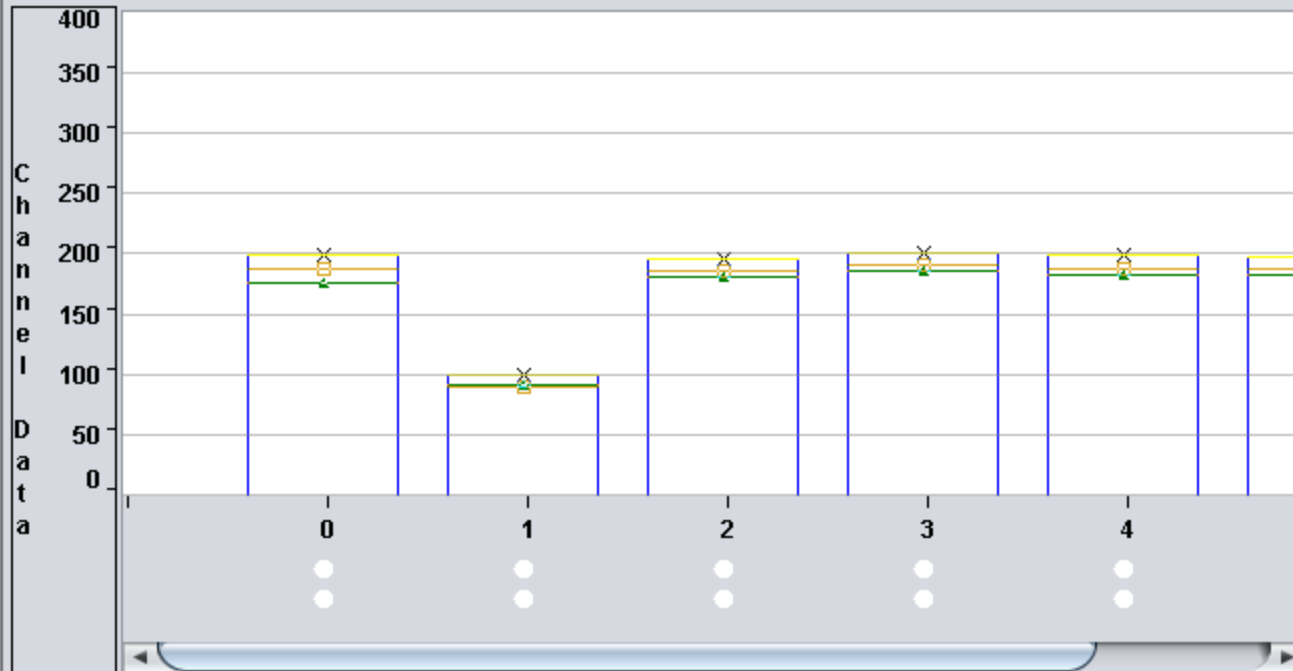

Target Communications

Connected

- RX00
- RX01
- RX02
- RX03
- RX04
- RX05

- Channel Bar Chart
- Channel Oscilloscope Plot
- Channel Table
- SNR
- Conversion_Control
- Tuning

Channel Data

Plot Display Options

Select All

Deselect All

- Count
- Delta
- Lta
- Prox Threshold
- Touch Threshold

Delta always Zero, and cannot see RED bar when touch

Sampling Progress

Measure SNR

Instructions

Signal to Noise Ratio (SNR) Measurement TAB

$$SNR(dB) = 20 \log \left(\frac{\text{Touch Strength}}{\text{Touch Noise}} \right)$$

$$\text{Touch Noise} = \sqrt{\frac{\sum_{n=0}^{\text{Sample Size}} (\text{touched}[n] - \text{Touched Average})^2}{\text{Sample Size}}}$$

$$\text{Untouched Noise} = \sqrt{\frac{\sum_{n=0}^{\text{Sample Size}} (\text{untouched}[n] - \text{Untouched Average})^2}{\text{Sample Size}}}$$

$$\text{Touch Strength} = |\text{UnTouched Average} - \text{Touched Average}|$$

$$\text{UnTouched Average} = \frac{\sum_{n=0}^{\text{Sample Size}} \text{untouched}[n]}{\text{Sample Size}}$$

$$\text{Touched Average} = \frac{\sum_{n=0}^{\text{Sample Size}} \text{touched}[n]}{\text{Sample Size}}$$

When connected to the target, the Measure SNR button will initiate a series of measurements on the highlighted element and perform the calculations described above and update the table accordingly. Additional options are available to adjust the sample size, apply filtering, and log the entire dataset.
