I am supposed to see this in the workspace.

Figure 21. Project Window

5. Open *main.cfg* file by double-clicking on the file name in the project window.

*Getting Started Hardware and Software*   www.ti.com

6. Under *Project Options* select *Open Loop* as shown in Figure 22. Save *main.cfg* file. Note that the default software does not allow phase shedding in this build regardless of this selection in the *main.cfg*.

But I see this in the workspace: nothing appears on the Power Suite space. I thought maybe it requires a "build" to see the GUI. But not so.

What did I miss in the steps? Why do I not see the GUI screen as shown in the document TIDUCT9?
