

WEBENCH® Design Report

Design : 505 TLV62569DBVR
TLV62569DBVR 3.3V-3.3V to .90V @ 1.5A

Electrical BOM

Name	Manufacturer	Part Number	Properties	Qty	Price	Footprint
Cin	MuRata	GRM155R60J475ME87D Series= X5R	Cap= 4.7 uF ESR= 1.0 mOhm VDC= 6.3 V IRMS= 0.0 A	1	\$0.01	 0402_065 3 mm ²
Cout	TDK	C2012X7S1A226M125AC Series= X7S	Cap= 22.0 uF ESR= 1.0 mOhm VDC= 10.0 V IRMS= 0.0 A	3	\$0.26	 0805 7 mm ²
L1	Abracon Corporation	ASPI-0530HI-2R2M-T2	L= 2.2 µH 35.0 mOhm	1	\$0.43	 ASPI-0530HI 55 mm ²
Rfbb	Vishay-Dale	CRCW0402100KFKED Series= CRCW..e3	Res= 100.0 kOhm Power= 63.0 mW Tolerance= 1.0%	1	\$0.01	 0402 3 mm ²
Rfbt	Vishay-Dale	CRCW040249K9FKED Series= CRCW..e3	Res= 49.9 kOhm Power= 63.0 mW Tolerance= 1.0%	1	\$0.01	 0402 3 mm ²
U1	Texas Instruments	TLV62569DBVR	Switcher	1	\$0.06	 DBV0005A 10 mm ²

Operating Values

#	Name	Value	Category	Description
1.	Cin IRMS	711.735 mA	Capacitor	Input capacitor RMS ripple current
2.	Cin Pd	506.57 μ W	Capacitor	Input capacitor power dissipation
3.	Cout IRMS	62.843 mA	Capacitor	Output capacitor RMS ripple current
4.	Cout Pd	1.316 μ W	Capacitor	Output capacitor power dissipation
5.	IC Ipk	1.609 A	IC	Peak switch current in IC
6.	IC Pd	291.89 mW	IC	IC power dissipation
7.	IC Tj	100.864 degC	IC	IC junction temperature
8.	IC Tolerance	20.0 mV	IC	IC Feedback Tolerance
9.	ICThetaJA	140.0 degC/W	IC	IC junction-to-ambient thermal resistance
10.	Iin Avg	521.6 mA	IC	Average input current

#	Name	Value	Category	Description
11.	Ipp percentage	14.513 %	Inductor	Inductor ripple current percentage (with respect to average inductor current)
12.	L Ipp	217.69 mA	Inductor	Peak-to-peak inductor ripple current
13.	L Pd	78.888 mW	Inductor	Inductor power dissipation
14.	Cin Pd	506.57 μ W	Power	Input capacitor power dissipation
15.	Cout Pd	1.316 μ W	Power	Output capacitor power dissipation
16.	IC Pd	291.89 mW	Power	IC power dissipation
17.	L Pd	78.888 mW	Power	Inductor power dissipation
18.	Total Pd	371.28 mW	Power	Total Power Dissipation
19.	BOM Count	8	System	Total Design BOM count
20.	Duty Cycle	34.045 %	System	Duty cycle
21.	Efficiency	78.43 %	System	Steady state efficiency
22.	FootPrint	94.0 mm ²	System	Total Foot Print Area of BOM components
23.	Frequency	1.52 MHz	System	Switching frequency
24.	Iout	1.5 A	System	Iout operating point
25.	Mode	CCM	System	Conduction Mode
26.	Pout	1.35 W	System	Total output power
27.	Total BOM	\$1.3	System	Total BOM Cost
28.	Vin	3.3 V	System	Vin operating point
29.	Vin p-p	123.236 mV	System	Peak-to-peak input voltage
30.	Vout	900.0 mV	System	Operational Output Voltage
31.	Vout Actual	899.4 mV	System	Vout Actual calculated based on selected voltage divider resistors
32.	Vout Tolerance	4.028 %	System	Vout Tolerance based on IC Tolerance (no load) and voltage divider resistors if applicable
33.	Vout p-p	277.74 μ V	System	Peak-to-peak output ripple voltage

Design Inputs

Name	Value	Description
Iout	1.5	Maximum Output Current
VinMax	3.3	Maximum input voltage
VinMin	3.3	Minimum input voltage
Vout	900.0 m	Output Voltage
base_pn	TLV62569	Base Product Number
source	DC	Input Source Type
Ta	60.0	Ambient temperature

WEBENCH® Assembly

Component Testing

Some published data on components in datasheets such as Capacitor ESR and Inductor DC resistance is based on conservative values that will guarantee that the components always exceed the specification. For design purposes it is usually better to work with typical values. Since this data is not always available it is a good practice to measure the Capacitance and ESR values of C_{in} and C_{out} , and the inductance and DC resistance of $L1$ before assembly of the board. Any large discrepancies in values should be electrically simulated in WEBENCH to check for instabilities and thermally simulated in WebTHERM to make sure critical temperatures are not exceeded.

Soldering Component to Board

If board assembly is done in house it is best to tack down one terminal of a component on the board then solder the other terminal. For surface mount parts with large tabs, such as the DPAK, the tab on the back of the package should be pre-tinned with solder, then tacked into place by one of the pins. To solder the tab down to the board place the iron down on the board while resting against the tab, heating both surfaces simultaneously. Apply light pressure to the top of the plastic case until the solder flows around the part and the part is flush with the PCB. If the solder is not flowing around the board you may need a higher wattage iron (generally 25W to 30W is enough).

Initial Startup of Circuit

It is best to initially power up the board by setting the input supply voltage to the lowest operating input voltage 3.3V and set the input supply's current limit to zero. With the input supply off connect up the input supply to V_{in} and GND. Connect a digital volt meter and a load if needed to set the minimum load of the design from V_{out} and GND. Turn on the input supply and slowly turn up the current limit on the input supply. If the voltage starts to rise on the input supply continue increasing the input supply current limit while watching the output voltage. If the current increases on the input supply, but the voltage remains near zero, then there may be a short or a component misplaced on the board. Power down the board and visually inspect for solder bridges and recheck the diode and capacitor polarities. Once the power supply circuit is operational then more extensive testing may include full load testing, transient load and line tests to compare with simulation results.

Load Testing

The setup is the same as the initial startup, except that an additional digital voltmeter is connected between V_{in} and GND, a load is connected between V_{out} and GND and a current meter is connected in series between V_{out} and the load. The load must be able to handle at least rated output power + 50% (7.5 watts for this design). Ideally the load is supplied in the form of a variable load test unit. It can also be done in the form of suitably large power resistors. When using an oscilloscope to measure waveforms on the prototype board, the ground leads of the oscilloscope probes should be as short as possible and the area of the loop formed by the ground lead should be kept to a minimum. This will help reduce ground lead inductance and eliminate EMI noise that is not actually present in the circuit.

Design Assistance

1. Feature Highlights: Constant Average Current, up to 2A, 2.5 V to 5.5 V Input Voltage Range, Integrated Thermal Protection Ideal for portable applications
2. Master key : 387DE87BF1407981[v1]
3. **TLV62569** Product Folder : <http://www.ti.com/product/TLV62569> : contains the data sheet and other resources.
