

# bq2589x Application Diagram with MTK-PE+

5V (default) → 7V / 9V / 12V  
after MTK-PE Handshake

# Evaluation Condition

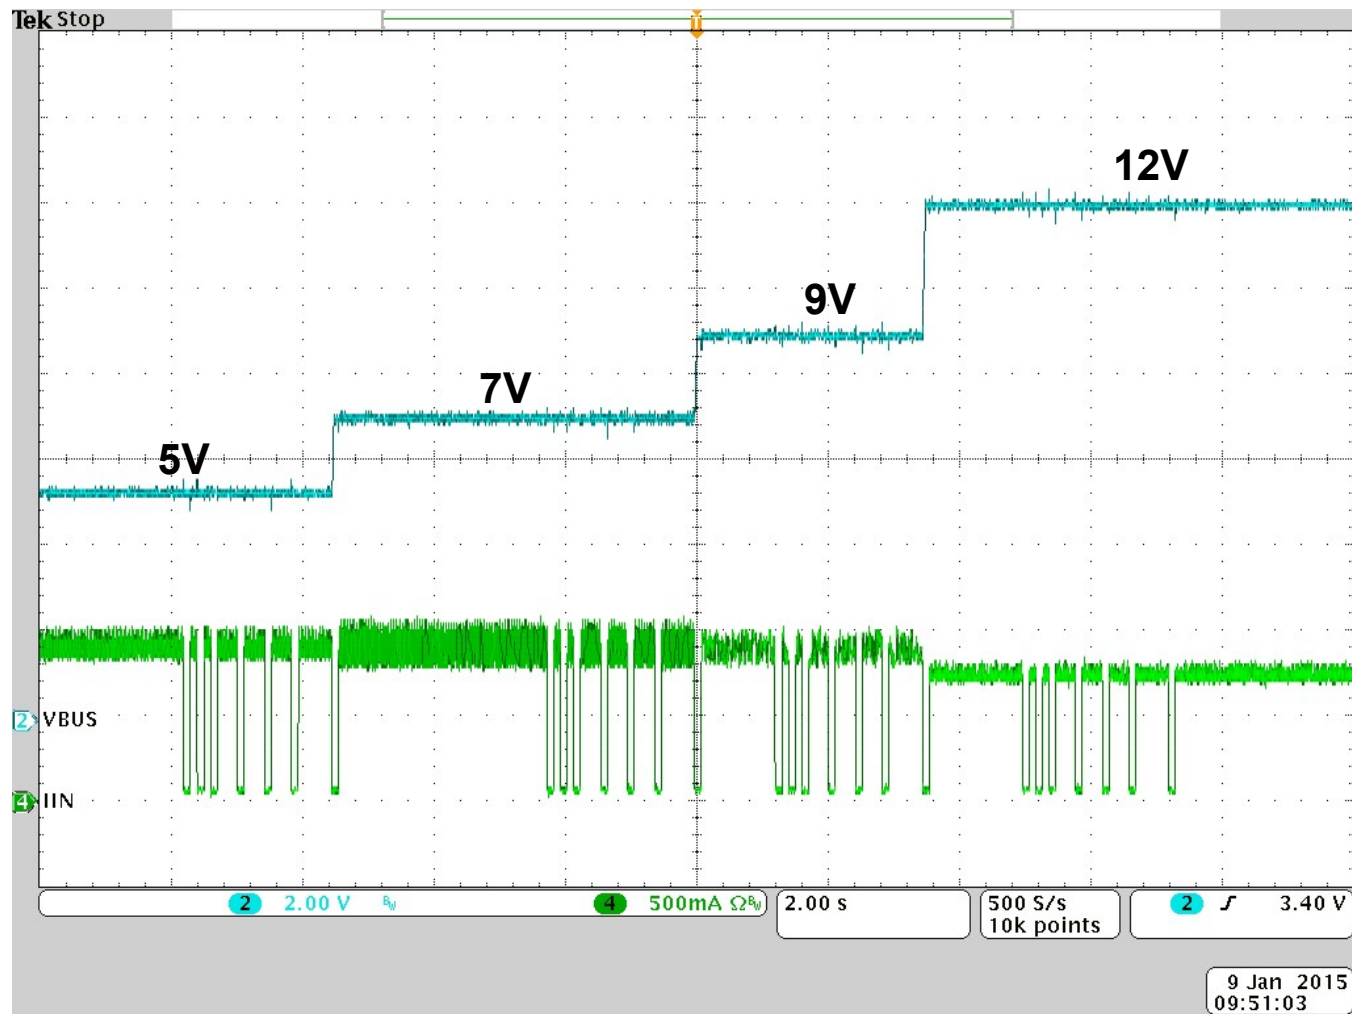

- Charge Current: 2.048A
- Battery Voltage: 3.8V

Register Bits for PE+ Control:

- *EN\_PUMPX* (REG04[7]): 0 –Disable (default); 1 –Enable
- *PUMPX\_UP* (REG09[1]): 0 – Disable; 1 – Enable PE+ Voltage Up
- *PUMPX\_DN*(REG09[0]): 0 – Disable; 1 – Enable PE+ Voltage Down

*\* Host must ensure PUMPX\_UP and PUMPX\_DN bits are not set while one of the sequences is in operations. The full sequence takes about 2.1s to complete.*

# PE+ Adaptor Voltage Up

Adaptor Voltage: 5V (default) → 7V → 9V → 12V

TI Confidential – NDA Restrictions

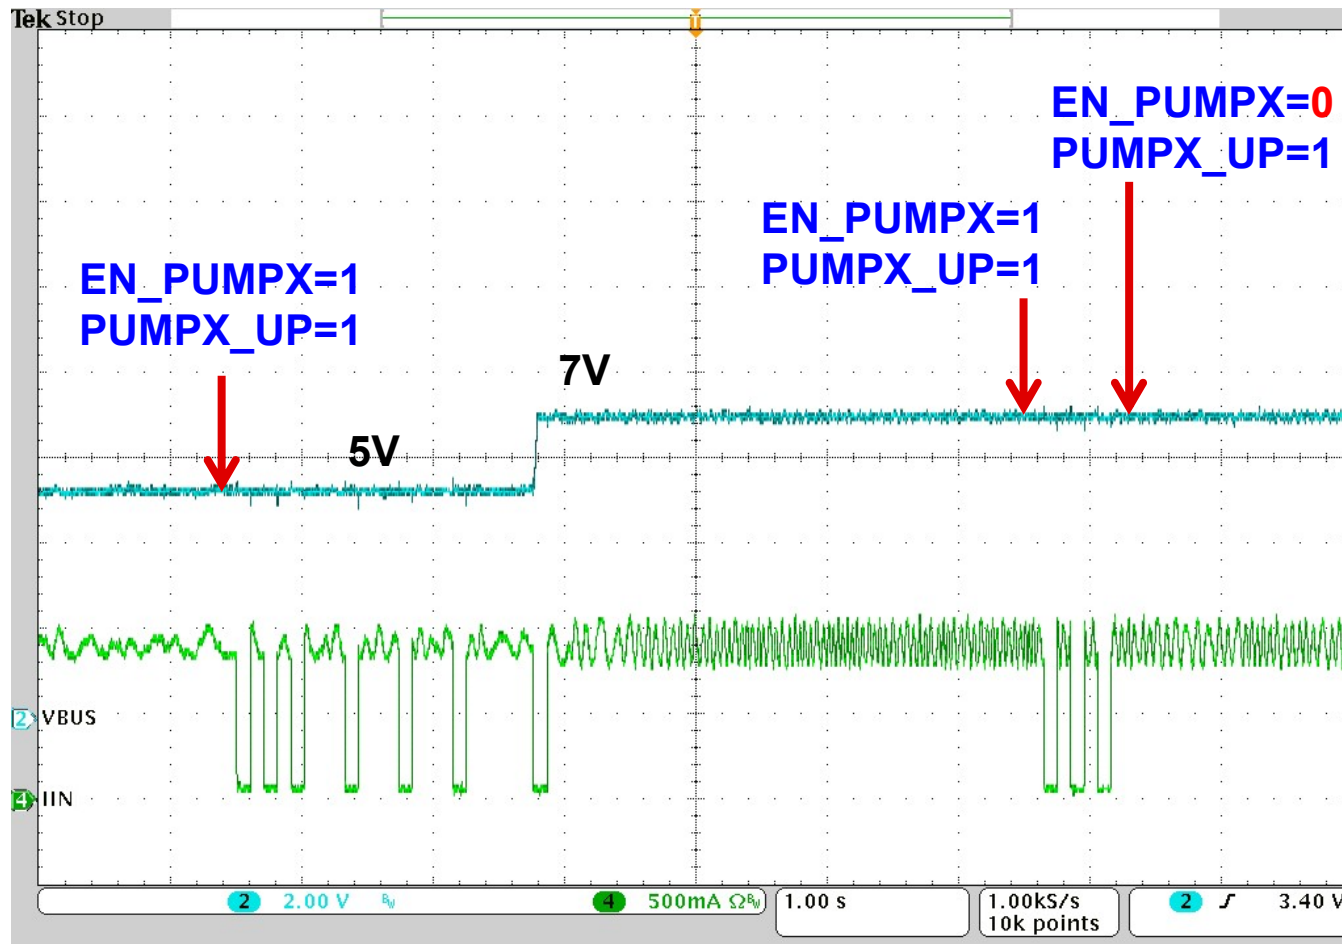

# PE+ Adaptor Voltage Down

Adaptor Voltage: 12V → 9V → 7V → 5V

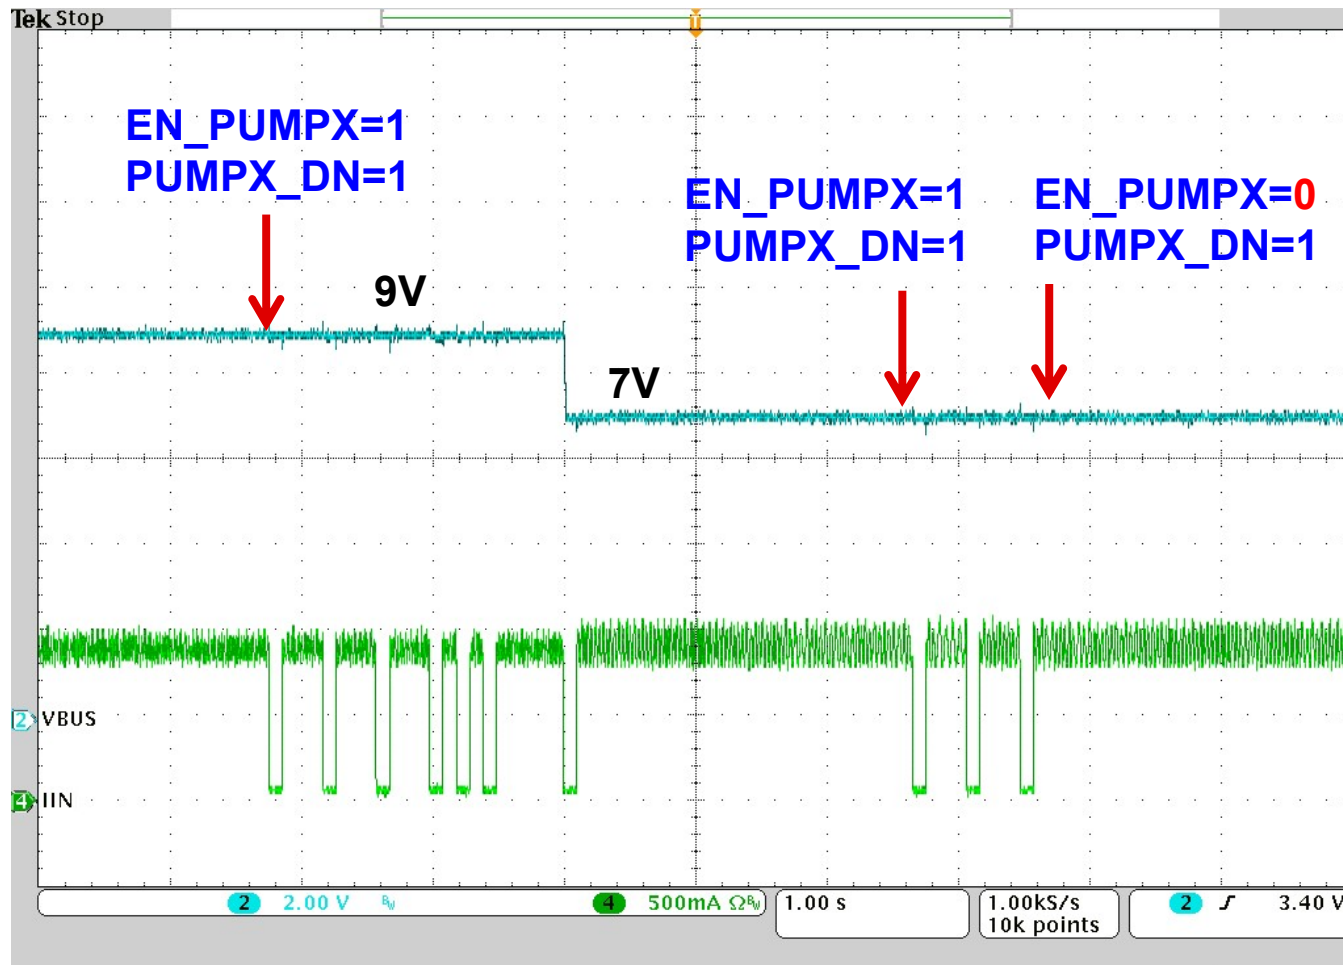

TI Confidential – NDA Restrictions

# Stop Voltage Up During Operation

Adaptor voltage not goes up when EN\_PUMPX is disabled even the voltage up process has started.

# Stop Voltage Down During Operation

Adaptor voltage not goes down when EN\_PUMPX is disabled even the voltage down process has started.

TI Confidential – NDA Restrictions
