

This circuit is specified by the CPU maker.  
Output Voltage is dynamic voltage scaling by the PWM signal.

Question  
Q1. Can TPS54229, TPS563210A do such a method?  
Q2. If method can possible,  
Could you teach the equation for calculating the resistance value of R4?  
Q3. If method can not possible,  
Could you teach other methods?
