

TPS54320 start up waveform

Calculated value:
Tss=3.06ms(min) 3.88ms(max)

C_{ss}=0.01µF(±10%)、
V_{ref}: 0.792~0.808V、
I_{ss}: 2.29~2.33µA

The customer thinks that the measured value should be slower than the calculated value.
Please tell me logically the reason is short rise time towards the measured values.
