

<Waveform① – I=High, Time Range=80us>

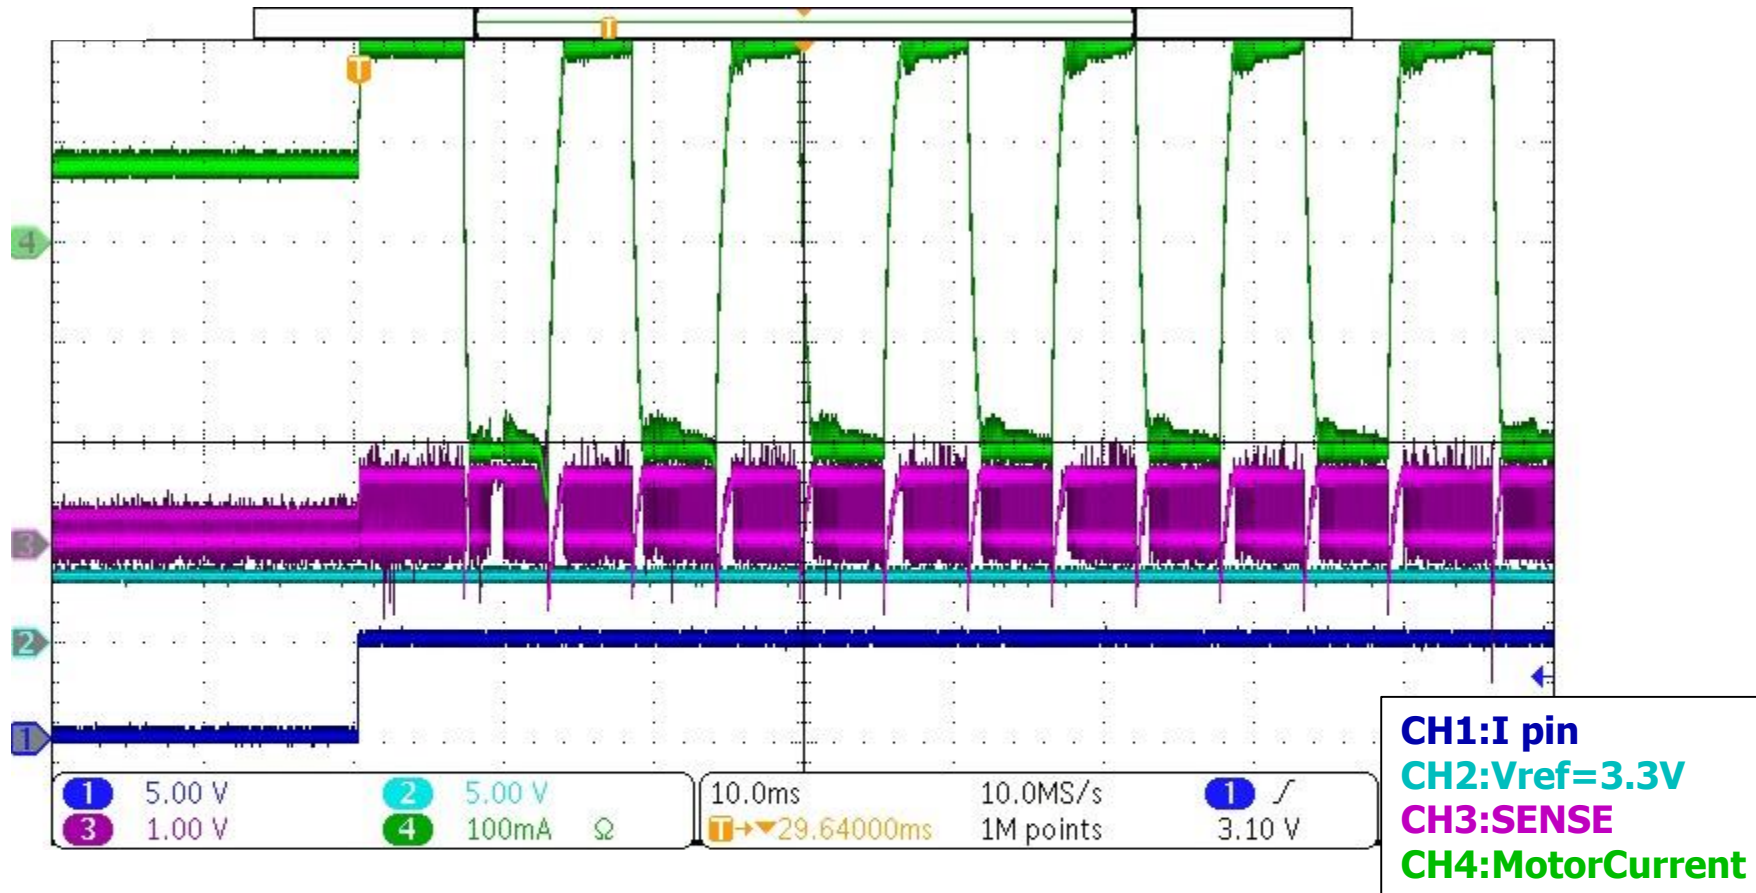

<Question>

As our recognition, in case of I pin=Low, current has to limit 12%(24mA). However, it shows 80mA.

What does the difference between 80mA and 24mA cause?

<Waveform② – I=High, Time Range=10ms>

※ We attach this wave form as reference.
The motor current is repeated with forward and reverse.
