

Schematic

(1) Normal Start-UP (without Retry)

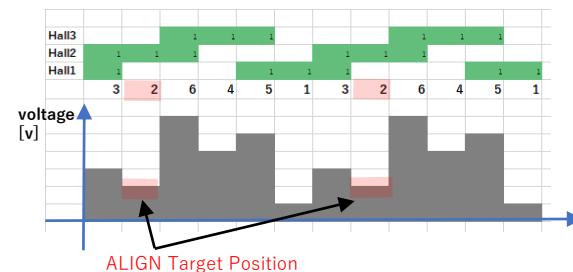

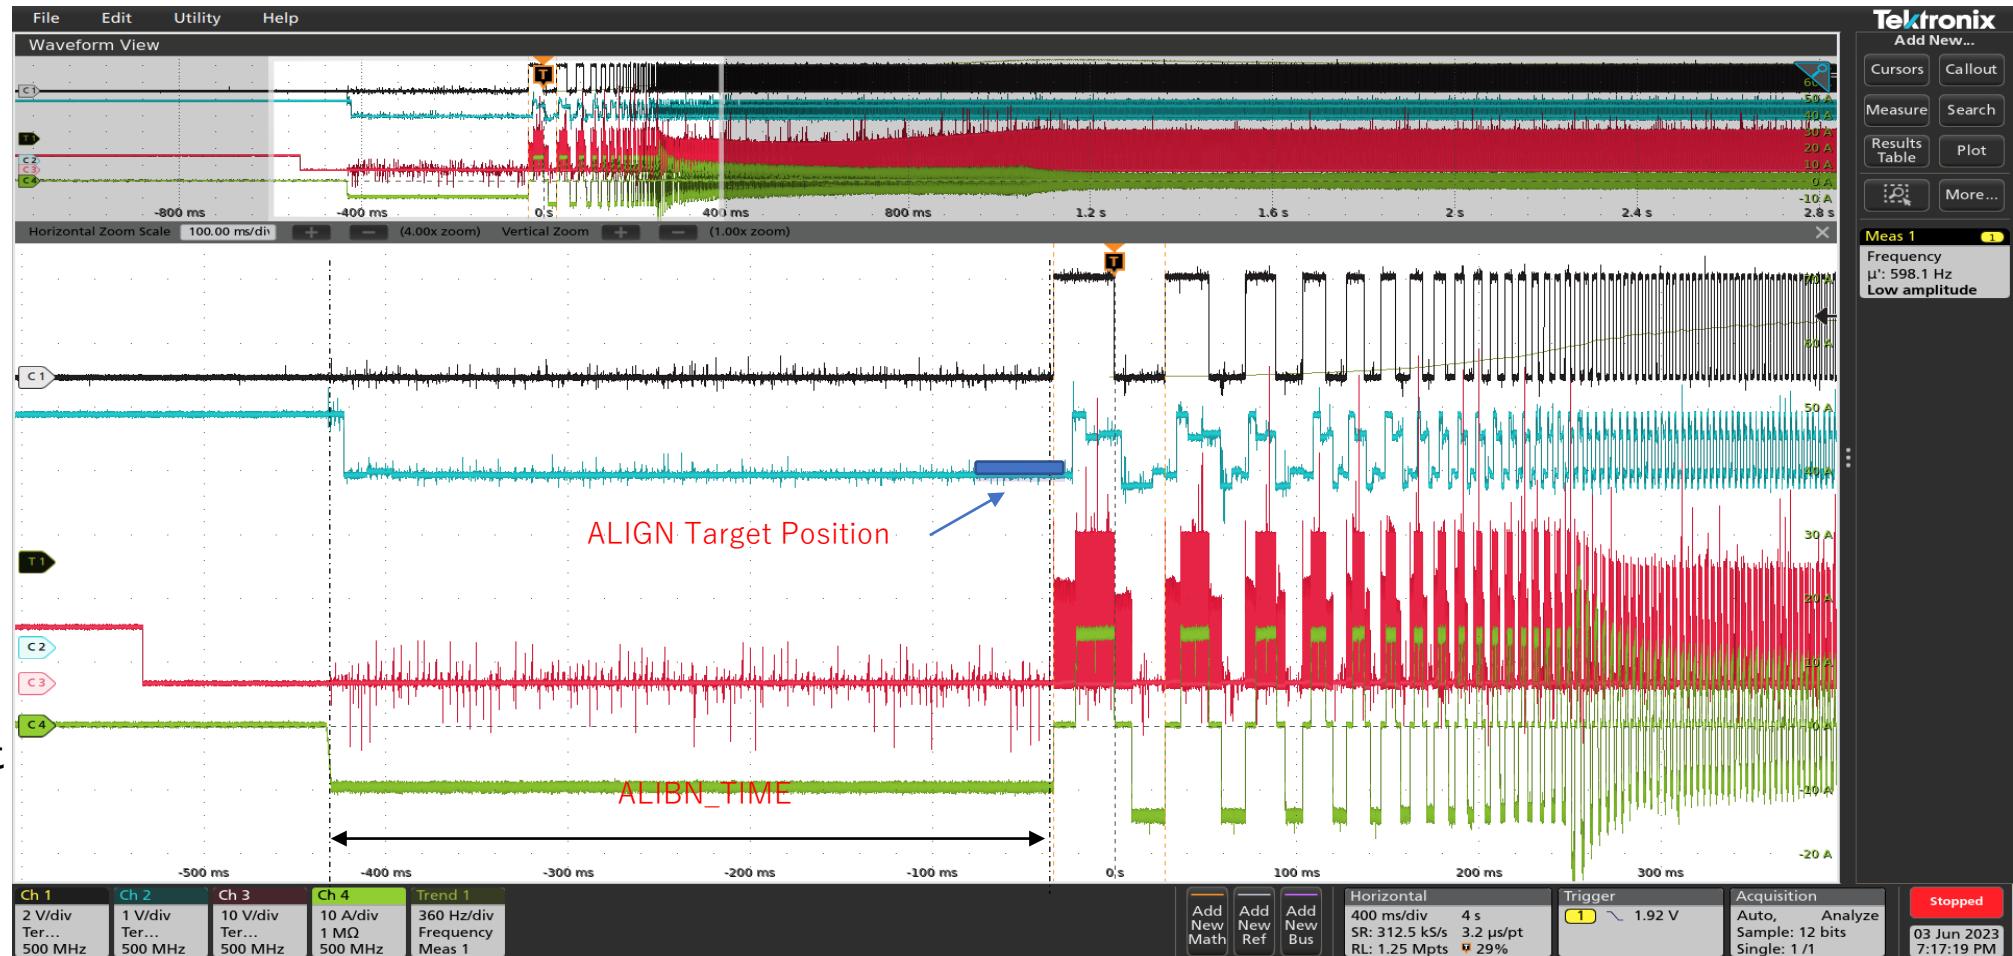

FG frequency

Motor Hall Signal

A Phase Voltage

A Phase Current

C⇒A

Hall signal is converted to voltage
Align pull-in position is at Hall Position [2].

(2) Normal Start-UP (without Retry)

AlignMode causes the motor shaft to move, but Retry does not occur.

(3) Abnormal Start-UP (with Retry)

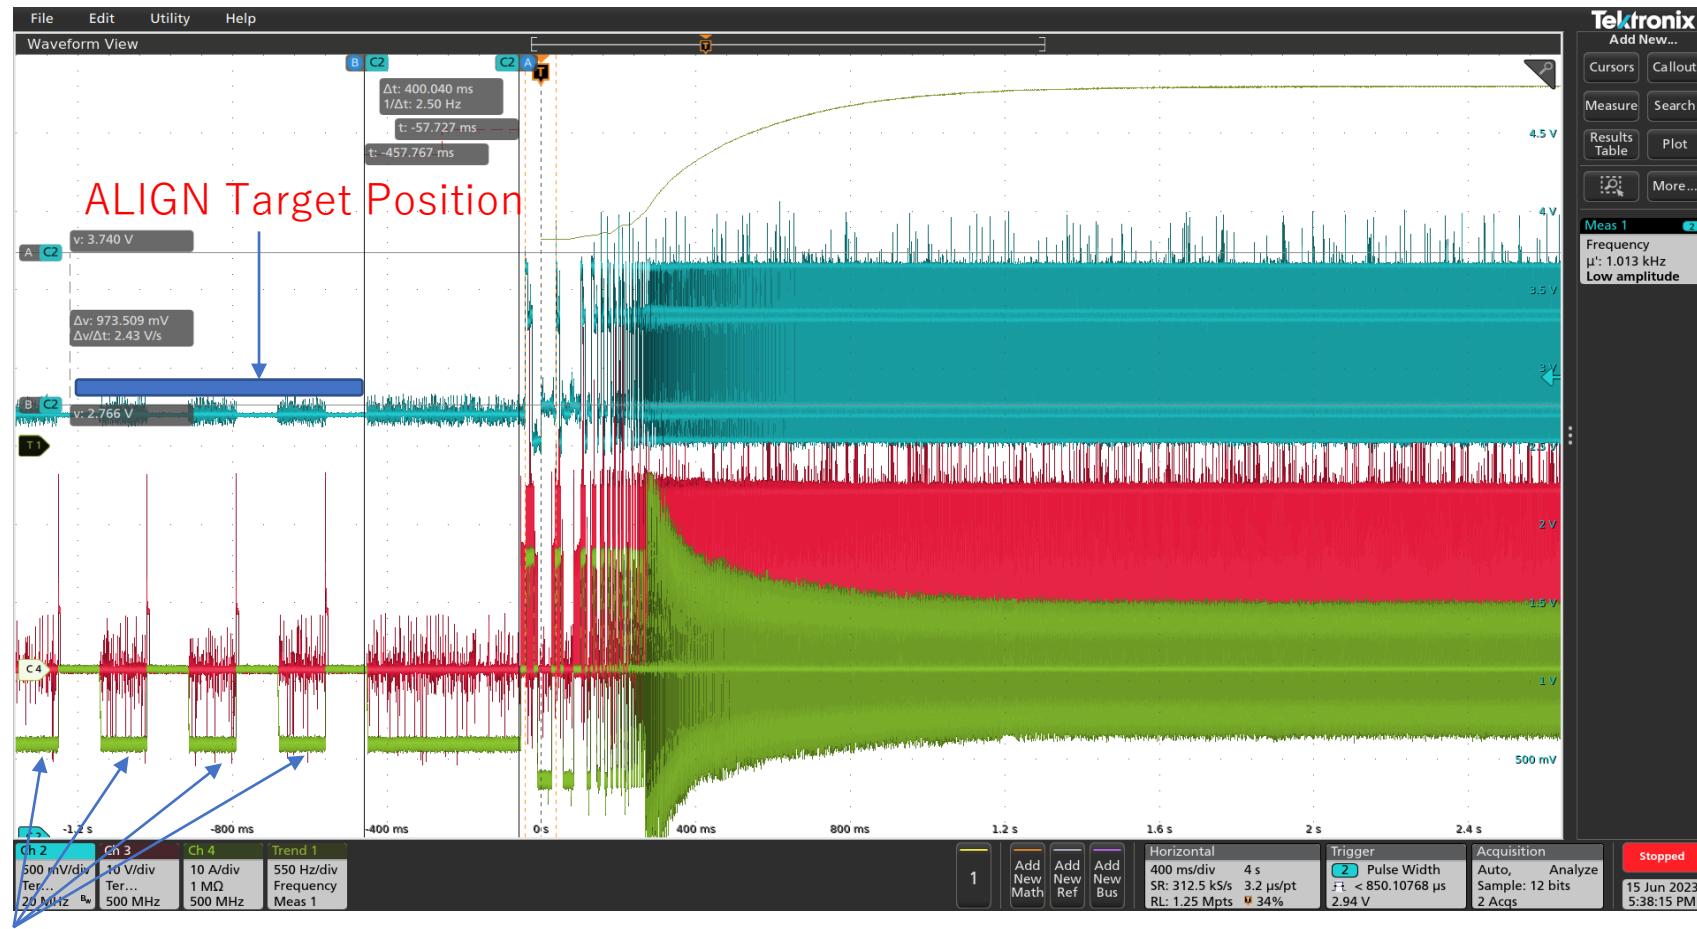

FG frequency

Motor Hall Signal

A Phase Voltage

A Phase Current

C \Rightarrow A

Align has settled the motor shaft in Hall Position [2], butRetry is occurring.

(4) Waveform expansion of (3) (with Retry)

FG frequency

Motor Hall Signal

A Phase Voltage

A Phase Current

C⇒A

ALIGN Retry

When stopped, A Phase voltage rises, but A Phase current does not flow, and current flows after the voltage drops.
