# <APLL1's setting>

■Question2■

APLL1's input clock is used XO or TCXO. So, what kind of clock type does it use in case of default setting?
We assume that we don't need to insert it using XO, is it correct?

And then, can we use Use Metrics for VCO noise?

<APLL2's setting>

■Question3■
And then, can we use Use Metrics for VCO noise also?
