

## ADS1256 Timing: Enable buffer mode

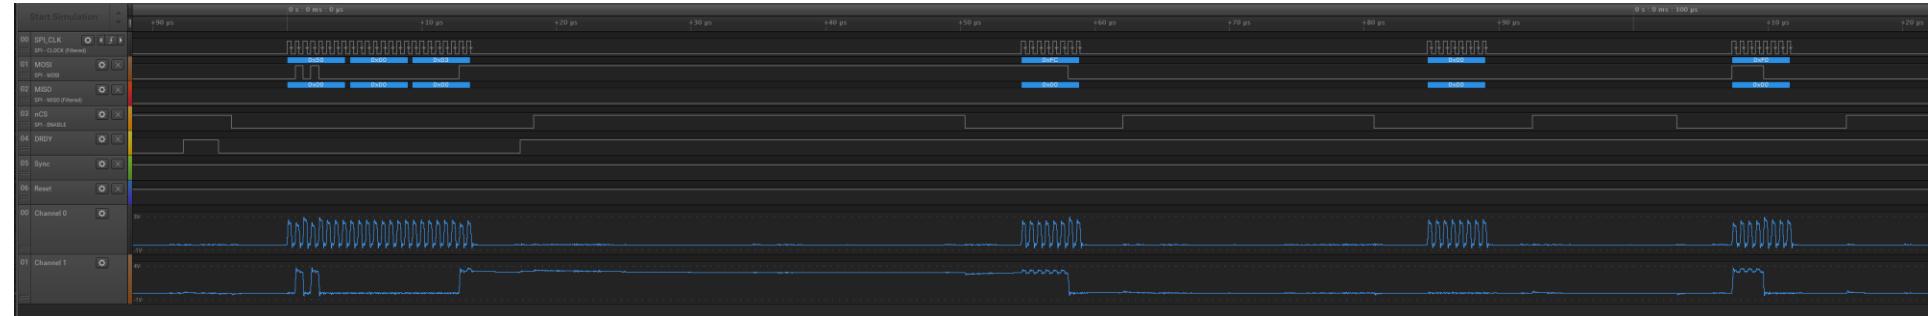

(Sy Tran, 9/15/2020)

### MMB0 C55x DSP SPI command timing

Sends 3-byte command (0x50, 0x00, 0x03).

Then follow on with three separate commands (0xFC), (0x00), (0xF0).

The DSP did not read back what it wrote.

### Adafruit FT232H SPI command timing

Sends 3-byte command (0x50, 0x00, 0x03).

Then follow on with three separate commands (0xFC), (0x00), (0xF0).

And wait 120mS to read back status register (0x10, 0x00); response = 0xFF
