

3 digital datas from AMC1210 :
we can see the different times
the ACK pin goes down after
reading data and then goes high
with a new data available

-- : ACK pin
-- : clock SPI
-- : signal MOSI
-- : signal MISO
Master : STM32
Slave : AMC1210

Reading of the Interrupt
register to know which filter
made the ACK pin high

Reading of the digital data in
the Data register

Ask to read Interrupt register

Read the Interrupt register

Ask to read Data register

Read Data register
