

WORKAROUND 2

For example, there is 4 byte data as follows

12	34	56	78
----	----	----	----

Read 1byte data from 4byte data

12	34	56	78
----	----	----	----

By **1st BE field**

00	00	56	00
----	----	----	----

Question 1:

If it reads the above data to a variable(RD), what kind of data will it be?(**1 or 2**)

Question 2:

Would you tell me how to set 1st BE field.

Question 1

1.

RD =

00	00	56	00
----	----	----	----

2.

RD =

00	00	00	56
----	----	----	----

Question 2

Example:

want to read 1st byte

12	34	56	78
----	----	----	----

want to read 3rd byte

12	34	56	78
----	----	----	----
