

After trying to import the SPI loopback example from the offline resource explorer, I got this error:

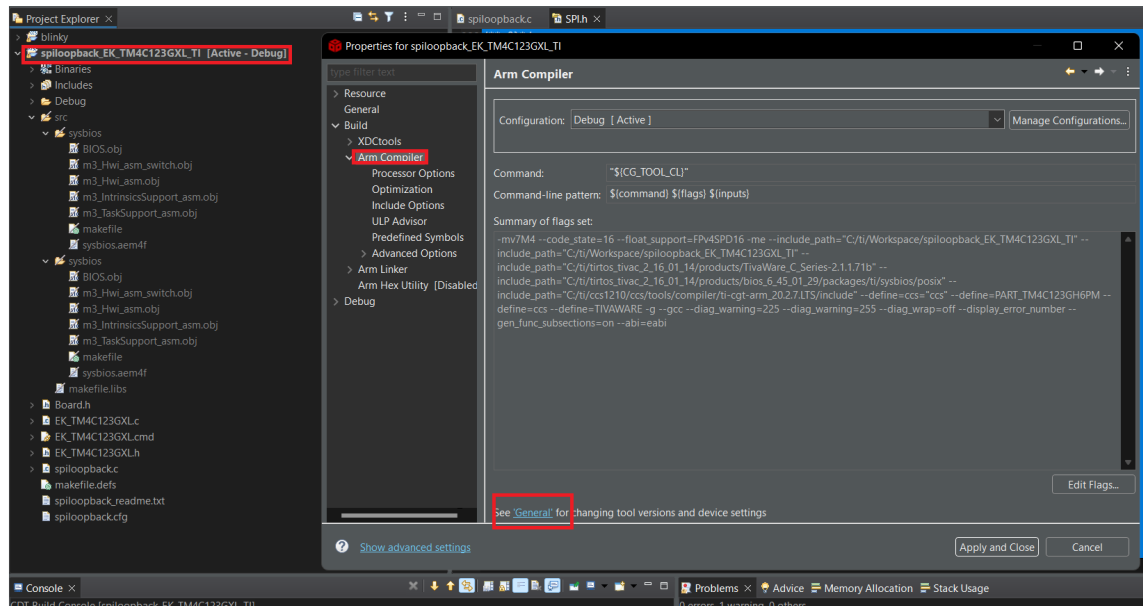

What I tried and did not help: And what I had to do was to re-run the CCS installer (without uninstalling CCS), and select to install the Sitara compiler(s), as instructed here:
<https://e2e.ti.com/support/tools/code-composer-studio-group/ccs/f/code-composer-studio-forum/383028/ccs-v6-does-not-see-installed-arm-compiler>

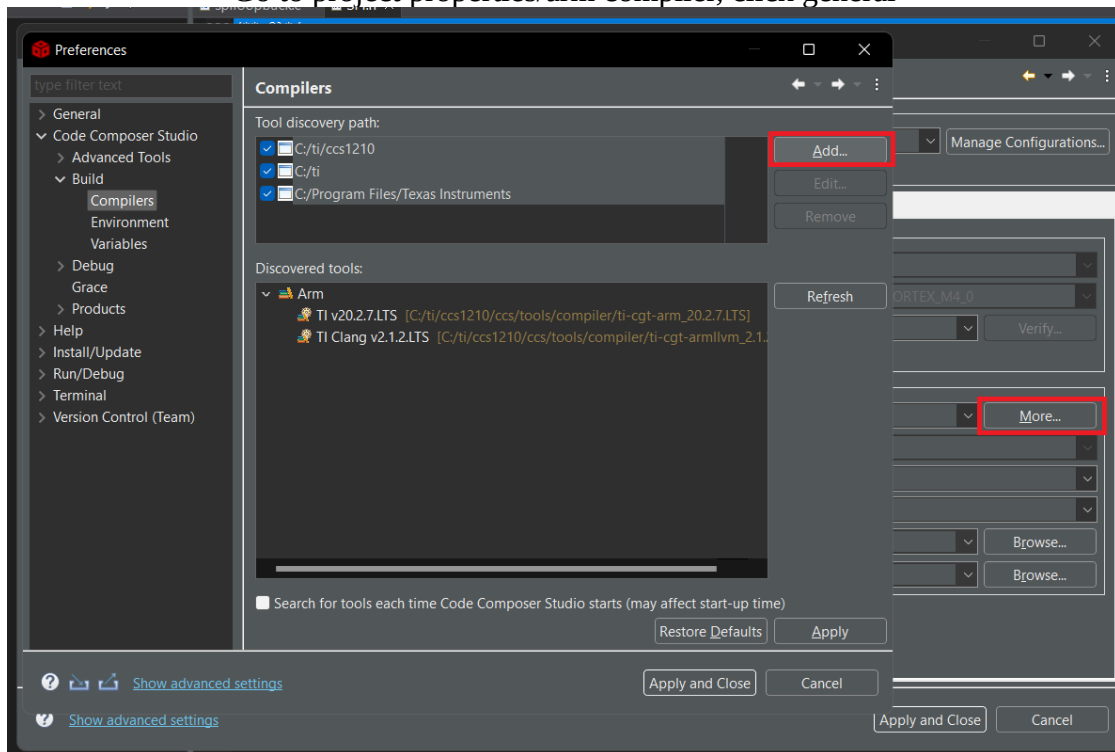

What did help:

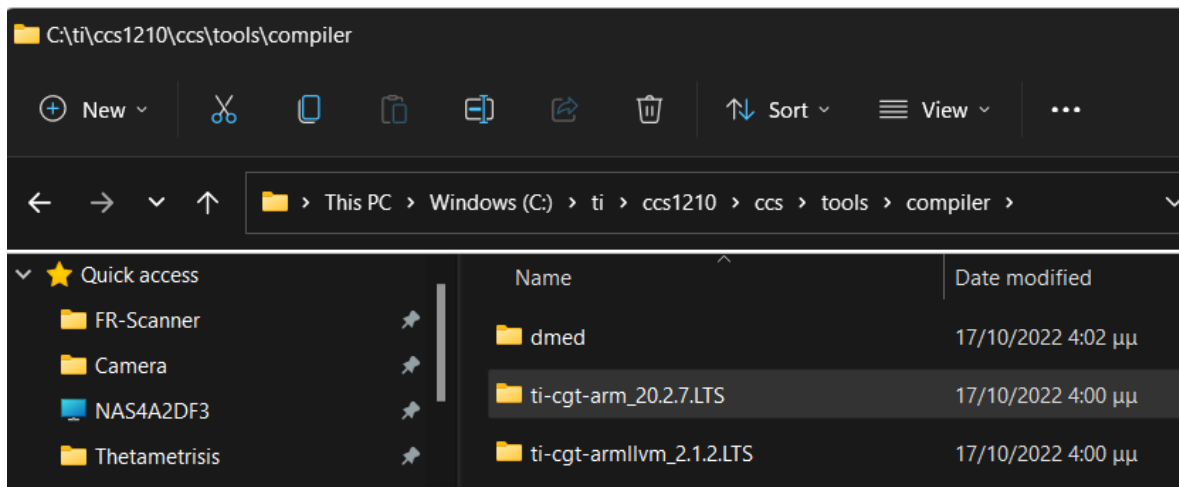

The arm compiler was already installed but not recognized by the CCS. So I had to show it the location of the compiler:

Go to project properties/arm compiler, click general

More/Add... and show the location of ti-cgt-arm installation, it should be in C:\ti\ccs1210\ccs\tools\compiler:

And they will be detected and installed automatically

If not installed, they may be downloaded from here: <https://www.ti.com/tool/ARM-CGT>
