Customer's Verification Environment

Shield-room (none other wireless devices)

|	PC Packet sniffer	
BOOSTXL-CC3135 + MSP-EXP432E401Y	•)))	(((• iPad

AP mode / TCP Server
Customer is using the default setting except IP configuration.

STA

After connecting to the client, 1000 bytes of data are transmitted to the client at a certain cycle.

Customer noticed the through-rate decreases in a cycle of about 15 seconds, like next page.
Therefore, customer would like to know the reason why this behavior was observed.
Can I have your expert's advice/comments on this, please?
If customer should do any configuration, please let us know.

Customer tried to verify it with other Wi-Fi module(AP), however, this behavior was not observed.

TEXAS INSTRUMENTS

The through-rate decreases in a cycle of about 15 seconds.
