

With input data

With no input data

SRC4182 is muted at no input from input source because MUTE pin tied to RDY pin. In this condition, DC level is output from SDOUT and it can cause noise.

[Question]

- 1, Is it normal operation the DC level is output from SDOUT at mute condition?
 - 2, Do you have the way to shut off this DC level output?
 - 3, Can they know what voltage is output from SDOUT if it's default operation?
- They are asking this because they confirmed various voltage at each checking.
