

## Fault-Protected RS-485 Transceivers With Extended Common-Mode Range

Check for Samples: [SN65HVD1785](#), [SN65HVD1786](#), [SN65HVD1787](#), [SN65HVD1791](#), [SN65HVD1792](#), [SN65HVD1793](#)

### FEATURES

- **Bus-Pin Fault Protection to:**
  - >  $\pm 70$  V ('HVD1785, 86,91,92)
  - >  $\pm 30$  V ('HVD1787, 93)
- **Common-Mode Voltage Range (–20 V to 25 V) More Than Doubles TIA/EIA 485 Requirement**
- **Bus I/O Protection**
  - $\pm 16$  kV JEDEC HBM Protection
- **Reduced Unit Load for Up to 256 Nodes**
- **Failsafe Receiver for Open-Circuit, Short-Circuit and Idle-Bus Conditions**
- **Low Power Consumption**
  - Low Standby Supply Current, 1  $\mu$ A Typ
  - $I_{CC}$  5 mA Quiescent During Operation
- **Power-Up, Power-Down Glitch-Free Operation**

### APPLICATIONS

- **Designed for RS-485 and RS-422 Networks**

### DESCRIPTION

These devices are designed to survive overvoltage faults such as direct shorts to power supplies, mis-wiring faults, connector failures, cable crushes, and tool mis-applications. They are also robust to ESD events, with high levels of protection to human-body model specifications.

These devices combine a differential driver and a differential receiver, which operate from a single power supply. In the 'HVD1785, 'HVD1786, and 'HVD1787, the driver differential outputs and the receiver differential inputs are connected internally to form a bus port suitable for half-duplex (two-wire bus) communication. In the 'HVD1793, the driver differential outputs and the receiver differential inputs are separate pins, to form a bus port suitable for full-duplex (four-wire bus) communication. These ports feature a wide common-mode voltage range, making the devices suitable for multipoint applications over long cable runs. These devices are characterized from  $-40^{\circ}\text{C}$  to  $105^{\circ}\text{C}$ .

For similar features with 3.3 V supply operation, see the SN65HVD1781 ([SLLS877](#)).

### PRODUCT SELECTION GUIDE

PART NUMBER	DUPLEX	SIGNALING RATE	NODES	CABLE LENGTH
SN65HVD1785	Half	115 kbps	Up to 256	1500 m
SN65HVD1786	Half	1 Mbps	Up to 256	150 m
SN65HVD1787	Half	10 Mbps	Up to 64	50 m
SN65HVD1791	Full	115 kbps	Up to 256	1500 m
SN65HVD1792	Full	1 Mbps	Up to 256	150 m
SN65HVD1793	Full	10 Mbps	Up to 64	50 m

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

## DEVICE INFORMATION

### DRIVER FUNCTION TABLE

Input	Enable	Outputs		
		A	B	
H	H	H	L	Actively drive bus high
L	H	L	H	Actively drive bus low
X	L	Z	Z	Driver disabled
X	OPEN	Z	Z	Driver disabled by default
OPEN	H	H	L	Actively drive bus high by default

### RECEIVER FUNCTION TABLE

Differential Input	Enable	Output	
$V_{ID} = V_A - V_B$	RE	R	
$V_{IT+} < V_{ID}$	L	H	Receive valid bus high
$V_{IT-} < V_{ID} < V_{IT+}$	L	?	Indeterminate bus state
$V_{ID} < V_{IT-}$	L	L	Receive valid bus low
X	H	Z	Receiver disabled
X	OPEN	Z	Receiver disabled by default
Open-circuit bus	L	H	Fail-safe high output
Short-circuit bus	L	H	Fail-safe high output
Idle (terminated) bus	L	H	Fail-safe high output

## ADDITIONAL OPTIONS

The SN65HVD17xx family also has options for J1708 applications, for always-enabled full-duplex versions (industry-standard SN65LBC179 footprint) and for inverting-polarity versions, which allow users to correct a reversal of the bus wires without re-wiring. Contact your local Texas Instruments representative for information on these options.

PART NUMBER	SN65HVD17xx		
	SLOW	MEDIUM	FAST
Half-duplex (176 pinout)	85	86	87
Full-duplex no enables (179 pinout)	88	89	90
Full-duplex with enables (180 pinout)	91	92	93
Half-duplex with cable invert	94	95	96
Full-duplex with cable invert and enables	97	98	99
J1708	08	09	10

## APPLICATION INFORMATION

### Hot-Plugging

These devices are designed to operate in "hot swap" or "hot pluggable" applications. Key features for hot-pluggable applications are power-up, power-down glitch free operation, default disabled input/output pins, and receiver failsafe. As shown in Figure 9, an internal Power-On Reset circuit keeps the driver outputs in a high-impedance state until the supply voltage has reached a level at which the device will reliably operate. This ensures that no spurious transitions (glitches) will occur on the bus pin outputs as the power supply turns on or turns off.

As shown in the device **FUNCTION TABLE**, the *ENABLE* inputs have the feature of default disable on both the driver enable and receiver enable. This ensures that the device will neither drive the bus nor report data on the R pin until the associated controller actively drives the enable pins.

## Receiver Failsafe

The differential receiver is “failsafe” to invalid bus states caused by:

- open bus conditions such as a disconnected connector,
- shorted bus conditions such as cable damage shorting the twisted-pair together,
- or idle bus conditions that occur when no driver on the bus is actively driving.

In any of these cases, the differential receiver outputs a failsafe logic High state, so that the output of the receiver is not indeterminate.

In the HVD17xx family of RS-485 devices, receiver failsafe is accomplished by offsetting the receiver thresholds so that the “input indeterminate” range does not include zero volts differential. In order to comply with the RS-422 and RS-485 standards, the receiver output must output a High when the differential input  $V_{ID}$  is more positive than 200 mV, and must output a Low when the  $V_{ID}$  is more negative than -200 mV. The HVD17xx receiver parameters which determine the failsafe performance are  $V_{IT+}$  and  $V_{IT-}$  and  $V_{HYS}$ . In the *Electrical Characteristics* table,  $V_{IT-}$  has a typical value of -150 mV and a minimum (most negative) value of -200 mV, so differential signals more negative than -200 mV will always cause a Low receiver output. Similarly, differential signals more positive than 200 mV will always cause a High receiver output, because the typical value of  $V_{IT+}$  is -100mV, and  $V_{IT+}$  is never more positive than -10 mV under any conditions of temperature, supply voltage, or common-mode offset.

When the differential input signal is close to zero, it will still be above the  $V_{IT+}$  threshold, and the receiver output will be High. Only when the differential input is more negative than  $V_{IT-}$  will the receiver output transition to a Low state. So, the noise immunity of the receiver inputs during a bus fault condition includes the receiver hysteresis value  $V_{HYS}$  (the separation between  $V_{IT+}$  and  $V_{IT-}$  ) as well as the value of  $V_{IT+}$ .

For the HVD17xx devices, the typical noise immunity is typically about 150 mV, which is the negative noise level needed to exceed the  $V_{IT-}$  threshold ( $V_{IT-}$  TYP = -150 mV). In the worst case, the failsafe noise immunity is never less than 40 mV, which is set by the maximum positive threshold ( $V_{IT+}$  MAX = -10mV) plus the minimum hysteresis voltage ( $V_{HYS}$  MIN = 30 mV).

## 70-V Fault-Protection

The SN65HVD17xx family of RS-485 devices is designed to survive bus pin faults up to  $\pm 70V$ . The devices designed for fast signaling rate (10 Mbps) will not survive a bus pin fault with a direct short to voltages above 30V when:

1. the device is powered on AND
  - 2a. the driver is enabled (DE=HIGH) AND D=HIGH AND the bus fault is applied to the A pin OR
  - 2b. the driver is enabled (DE=HIGH) AND D=LOW AND the bus fault is applied to the B pin

Under other conditions, the device will survive shorts to bus pin faults up to 70V. [Table 1](#) summarizes the conditions under which the device may be damaged, and the conditions under which the device will not be damaged.

**Table 1. Device Conditions**

POWER	DE	D	A	B	RESULTS
OFF	X	X	$-70V < V_A < 70V$	$-70V < V_B < 70V$	Device survives
ON	LO	X	$-70V < V_A < 70V$	$-70V < V_B < 70V$	Device survives
ON	HI	L	$-70V < V_A < 70V$	$-70V < V_B < 30V$	Device survives
ON	HI	L	$-70V < V_A < 70V$	$30V < V_B$	Damage may occur
ON	HI	H	$-70V < V_A < 30V$	$-70V < V_B < 30V$	Device survives
ON	HI	H	$30V < V_A$	$-70V < V_B < 30V$	Damage may occur

## REVISION HISTORY

<b>Changes from Original (January 2008) to Revision A</b>	<b>Page</b>
• Changed Features Bullet From: Low Standby Supply Current, 2 $\mu$ A Max To: Low Standby Supply Current, 1 $\mu$ A Typ .....	1
• Deleted columns to the PRODUCT SELECTION GUIDE for Package Options and Status. ....	1
• Added text: For similar features with 3.3 V supply operation... ..	1
• Changed the Product Selection Guide Signaling Rate for SN65HVD1787 From 20 Mbps To: 10 Mbps .....	1
• Changed the Product Selection Guide Signaling Rate for SN65HVD1793 From 20 Mbps To: 10 Mbps .....	1
• Deleted The Competitive Comparison table. ....	2
• Added $ V_{OD} $ RS-485 with common-mode load $T_A \leq 85^\circ\text{C}$ and $T_A \leq 105^\circ\text{C}$ .....	4
• Changed $\Delta V_{OC}$ From min = -0.2 mV and max 0.2 mV To: min = -100 mV and max 100 mV .....	4
• Changed HVD1785/1791 Driver differential output rise/fall time max value From 2.5 $\mu$ s To: 2.6 $\mu$ s. ....	5
• Changed HVD1787/1793 Driver differential output rise/fall time max value From 1.5 ns To: 30 ns. ....	5
• Changed Receiver propagation delay max value From 50 ns To: 70 ns. ....	5
• Changed $t_{PLZ}$ , $t_{PHZ}$ Receiver disable time From 3000 ns To 100 ns. ....	5
• Deleted graph DIFFERENTIAL OUTPUT VOLTAGE vs DIFFERENTIAL LOAD CURRENT. ....	10
<hr/>	
<b>Changes from Revision A (March 2008) to Revision B</b>	<b>Page</b>
• Added $T_A \leq 85^\circ\text{C}$ and $T_A \leq 105^\circ\text{C}$ conditions and values to the Receiver low-level output voltage. ....	4
• Changed the max value for Supply Current (quiescent) Driver and receiver disabled, From 1 $\mu$ A To 5 $\mu$ A. ....	4
<hr/>	
<b>Changes from Revision B (March 2008) to Revision C</b>	<b>Page</b>
• Changed Rec Op Table. Signaling rate, HVD1787, HVD1793 From: 20 Mbps max to 10 Mbps max. ....	3
<hr/>	
<b>Changes from Revision C (March 2008) to Revision D</b>	<b>Page</b>
• Added Features Bullet: Power-Up, Power-Down Glitch-Free Operation .....	1
• Changed (Preview) to part number SN65HVD1791 in the Product Selection Guide .....	1
• Changed Receiver disabled by default - Enable from X to OPEN. Output from OPEN to Z .....	2
• Changed SN65HVD1791, 1792, 1793 pin out. Pin 11 from A to B, Pin 12 from B to A. ....	2
• Added section - APPLICATION INFORMATION .....	13
<hr/>	
<b>Changes from Revision D (June 2008) to Revision E</b>	<b>Page</b>
• Changed - Removed Product Preview label .....	1
• Changed SN65HVD1792 Removed Product Preview label .....	1
• Changed SN65HVD1793 Removed Product Preview label .....	1
<hr/>	
<b>Changes from Revision E (July 2008) to Revision F</b>	<b>Page</b>
• Added to Title: With Extended Common-Mode Range .....	1
• Added Receiver enabled $V_{CM} > V_{CC}$ condition and values to the Driver enabled time .....	5
• Added <a href="#">Figure 12</a> .....	11

---

**Changes from Revision F (November 2008) to Revision G**

**Page**

• Added Notes for pin connections. ....	2
• Added $I_{OH} = -400 \mu A$ conditions and values to the Receiver high-level output voltage .....	4
• Added Receiver enabled $V_{CM} > V_{CC}$ .....	5
• Added Receiver Failsafe information. ....	13
• Changed the Receiver Failsafe section .....	14

---

**Changes from Revision G (April 2009) to Revision H**

**Page**

• Deleted 70-V from the data sheet title .....	1
• Changed first Features Bullet From: Bus-Pin Fault Protection to $> \pm 70 V$ To: Bus-Pin Fault Protection to: $> \pm 70 V$ ('HVD1785, 86,91,92), $> \pm 30 V$ ('HVD1787, 93) .....	1
• Changed Voltage range at A and B inputs in the ABS MAX RATINGS table, adding separate conditions for the different devices .....	3
• Changed From: Voltage input range, transient pulse, A and B, through $100 \Omega$ To: Transient overvoltage pulse through $100 \Omega$ per TIA-485 .....	3
• Changed <a href="#">Figure 14</a> From: PW Package (Top View) To: D Package (Top View) .....	12
• Added the 70-V Fault-Protection section .....	14

---

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

---

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

P (R-PDIP-T8)

PLASTIC DUAL-IN-LINE PACKAGE

4040082/E 04/2010

- NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - C. Falls within JEDEC MS-001 variation BA.

D (R-PDSO-G14)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - $\triangle C$  Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.006 (0,15) each side.
  - $\triangle D$  Body width does not include interlead flash. Interlead flash shall not exceed 0.017 (0,43) each side.
  - E. Reference JEDEC MS-012 variation AB.

D (R-PDSO-G14)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Publication IPC-7351 is recommended for alternate designs.
  - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
  - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

D (R-PDSO-G8)

PLASTIC SMALL OUTLINE

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Publication IPC-7351 is recommended for alternate designs.
  - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
  - Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
