Product Specification

1. Summary

This module utilizes amorphous silicon thin film transistors and a 16:9 aspect ratio. The 7.0" active matrix liquid crystal display allows 16,777,216 colors to be displayed by LVDS interface is available.

2. Features

- Utilizes a panel with a 16:9 aspect ratio.
- The 7.0" screen produces a high resolution image that is composed of 384,000 pixel elements in a stripe arrangement.
- By adopting In Plane Switching (IPS) technology, provide a wide viewing angle.
- By adopting an active matrix drive, a picture with high contrast is realized.
- By using of COG mounting technology, the module became thin, light and compact.
- By adopting a high aperture panel, high transmittance color filter and high transmission polarizing plates, transmittance ratio is realized.
- Gray scale or the brightness of the sub-pixel color is determined with a 8-bit gray scale signal.
- By adopting LVDS interface, the module has a good performance in terms of EMI.

Product Specification**3. General Description**

Active Screen Size	7.0 inches diagonal
Outline Dimension	170 mm (H) × 106.3 mm (V) X 10 mm (D) (Typ.)
Pixel Pitch	0.1905 mm x 0.1905 mm
Pixel Format	800 horiz. by 480 vert. Pixels, RGB stripe arrangement
Color Depth	8bit, 16,777,216 colors
Luminance, White	450 cd/m ² (Center 1point ,Typ.)
Viewing Angle (CR>10)	Viewing angle free (R/L 178 (Min.), U/D 178 (Min.))
Power Consumption	Total 3.4W (Typ.) [Logic= 0.9W, Backlight= 2.5W (BL_DIM=100%)]
Weight	220.0g (MAX)
Display Mode	Transmissive mode, Normally Black
Surface Treatment	Anti-glare treatment of the front polarizer

Product Specification

4. Absolute Maximum Ratings

The following items are maximum values which, if exceeded, may cause faulty operation or damage to the LCD module.

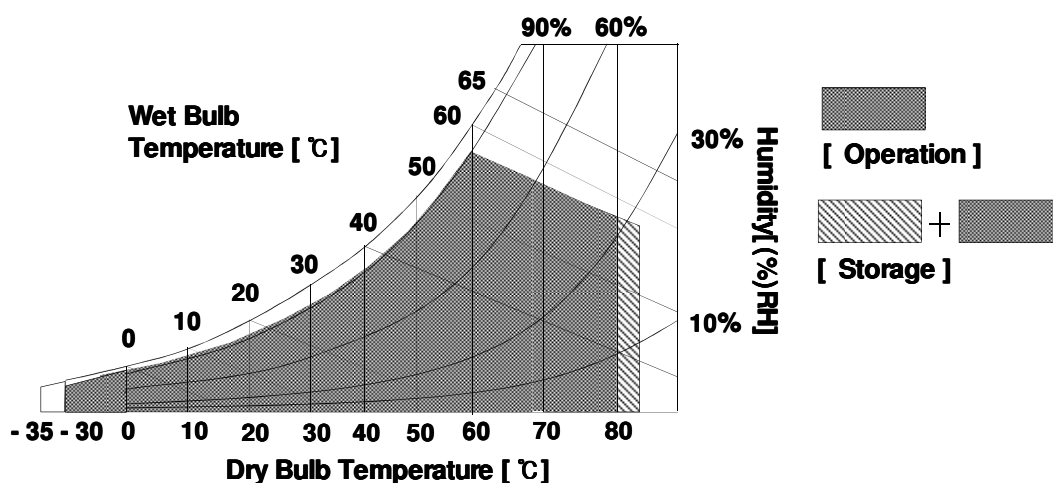

Table 1. ABSOLUTE MAXIMUM RATINGS

Parameter		Symbol	Value		Unit	Note
			Min	Max		
Power Supply Voltage	LCD	V _{CC}	-0.3	3.6	V	
	Backlight	V _{BL}	-0.3	12.6	V	
Storage Temperature		T _{ST}	-30	85	°C	1
Operating Temperature		T _{OP}	-30	80	°C	2,3,

Note 1. Temperature and relative humidity range are shown in the figure below.

Wet bulb temperature should be Max. 58°C. Condensation of dew must be avoided, because it may cause electrical current leakage, and deterioration of performance and quality.

- The operating temperature means that LCD Module guarantees operation of the circuit.
All the contents of Electro-optical specifications are guaranteed under the room temperature condition.
- This temperature is ambient temperature with regard to the heat which is generated under operation of circuit and backlight on. (reference value)

Product Specification

5. Electrical Specifications

5-1. Electrical Characteristics

It requires two power inputs. One is employed to power for the LCD circuit. The other is used for the LED backlight.

Table 2. LCD DRIVING CIRCUIT ELECTRICAL CHARACTERISTICS

Parameter		Symbol	Value			Unit	Note
			Min	Typ	Max		
Power Supply Voltage		V _{LCD}	3.0	3.3	3.6	V	
Power Supply Current	Mosaic	I _{LCD}	-	262	341	mA	1
	White	I _{LCD}	-	310	403	mA	
Power Consumption		P _{LCD}	-	0.9	1.3	Watt	
Rush Current		I _{RUSH}	-	-	1.5	A	2

- Note 1. The specified current and power consumption are under the V_{LCD}=3.3V, T_a=25 ± 2°C, f_v=60Hz condition whereas mosaic pattern(8 x 6) and white pattern are displayed and f_v is the frame frequency.
2. The duration of rush current is about 2ms and rising time of power input is 0.5ms (min.). (V_{LCD}=3.3V, T_a=25 ± 2°C, f_v=60Hz)
3. The recommended operating conditions show the ranges in which the device can operate normally. Operation beyond the limit of the recommended operation conditions is not assured, even though operating conditions are within the limit of the maximum ratings.

White : 63 Gray
Black : 0 Gray

Mosaic Pattern(8 x 6)

Product Specification

Table 3. BACKLIGHT ELECTRICAL CHARACTERISTICS

Parameter			Symbol	Values			Unit	Note
				Min	Typ	Max		
Power Supply Voltage			V _{BL}	11	12	12.5	V	1
Power Supply Current			I _{BL}	-	210	280	mA	
Power Consumption			I	-	2.5	3.5	W	
Input & Control Signal	On/Off	On	V _{on}	2	-	12	V	
		Off	V _{off}	-	0	0.5	V	
	Brightness Adjust		Dimming	10		100	%	On Duty
	BL_DIM Frequency		F _{PWM}	0.5	1	20	KHz	3
	Pulse Duty Level (BL_DIM)		V _H	2.7	-	3.3	V	HIGH : on duty LOW : off duty
			V _L	0.0	-	0.3	V	
Life Time				30,000			Hrs	4

- Note 1. Electrical characteristics are determined after the unit has been 'ON' and stable for approximately 60 minutes at $25 \pm 2^\circ\text{C}$. The specified current and power consumption are under the typical supply Input voltage 12V(BL_DIM=100%), it is total power consumption.
2. The permissible forward current of LED vary with environmental temperature.

3. DC current dimming is recommended for LED control. If PWM dimming is needed, PWM frequency should be optimized for minimal wavy and audible noise.
4. The life time is determined as the time at which brightness of LED is 50% compare to that of initial value at the typical LED current.

Product Specification

5-2. Interface Connections

This LCD module employs only one interface connections, 30-pin connector(CN1)

5-2-1. User Connector(CN1) Pin Configuration

The electronics interface connector is a model FI-X30SSL (Manufactured by JAE)

Product Specification

5-2-2. Connection between Host system and LVDS receiver

If input data is 8bit, connect MSB 2bit of R,G,B to TD0~TD5 pin of LVDS Tx. Refer to FIG 1 for more detail.

Fig 1. REQUIRED SIGNAL ASSIGNMENT FOR LVDS TRANSMITTER(THC63LVDM83R)

Product Specification

5-3. Signal Timing Specifications

Table 5 shows the signal timing required at the input of the LVDS transmitter. All of the interface signal timings should be satisfied with the following specification for normal operation.

Table 5. SIGNAL TIMING CHARACTERISTICS

Ta=25℃

Item		Symbol	Min.	Typ.	Max.	Unit	Remarks
DCLK	Frequency	f_{DOTCLK}	31.95	33.26	34.60	MHz	
	Period	$1/f_{\text{DOTCLK}}$	28.90	30.06	31.30	ns	
Horizontal	Total Period	t_{H}	1024	1056	1088	clk	
	Display Area Period	t_{HDISP}	800	800	800		
	Blank Period	t_{HB}	224	256	288		
Vertical	Total Period	t_{V}	520	525	530	line	
	Display Area Period	t_{VDISP}	480	480	480		
	Blank Period	t_{VB}	40	45	50		

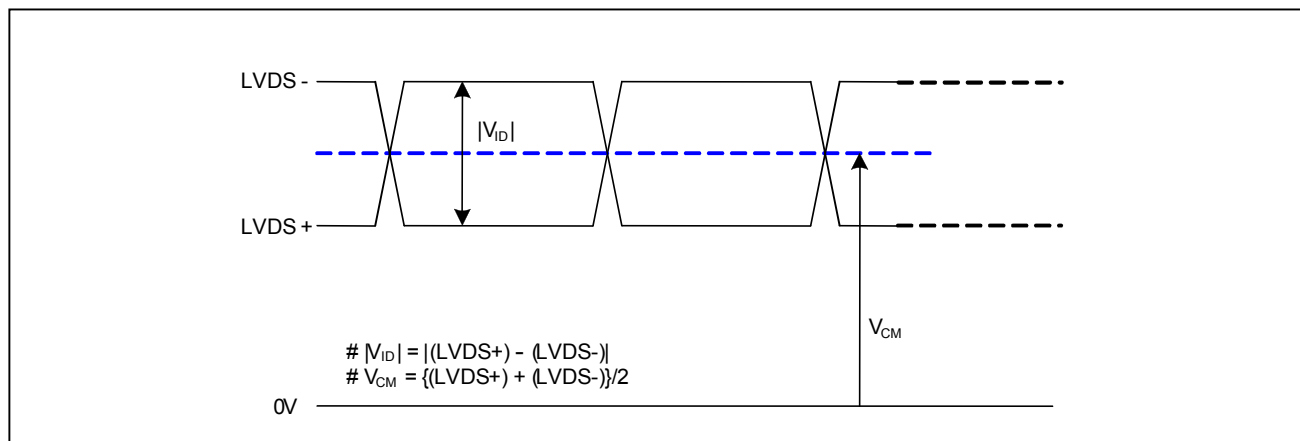

Note:

1. DE Only mode operation. The input of Hsync & Vsync signal does not have an effect on LCD normal operation.
2. The performance of the electro-optical characteristics may be influenced by variance of the vertical refresh rates.

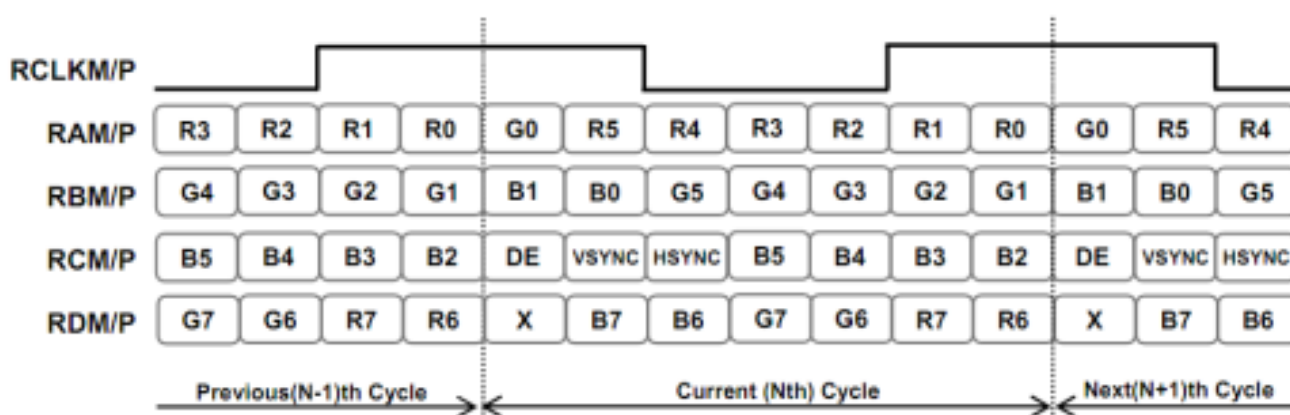

Product Specification

Product Specification

5-6. Power Sequence

For LCD's normal operation, it is recommended to keep below power supply sequence.

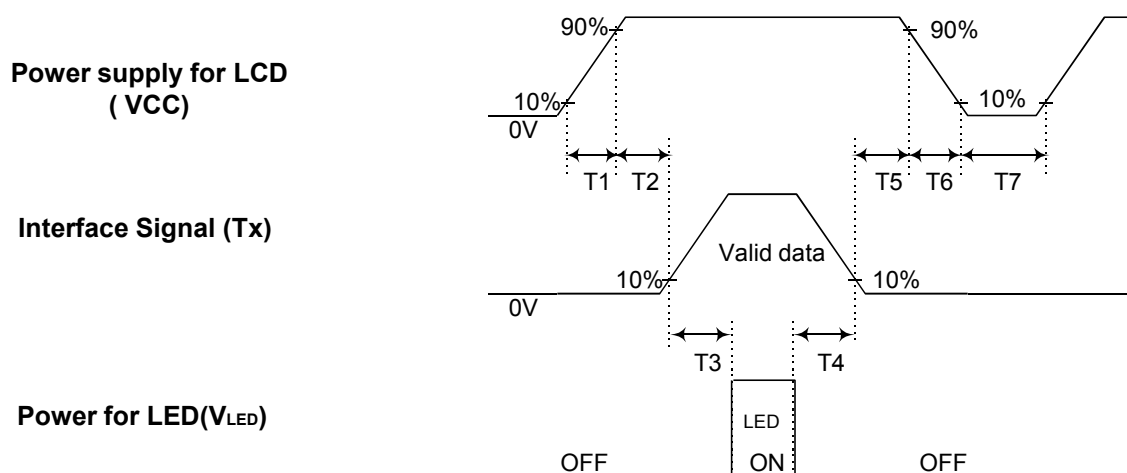

Table 9. POWER SEQUENCE TABLE

Parameter	Value			Units
	Min.	Typ.	Max.	
T ₁	-	-	10	(ms)
T ₂	50	-	-	(ms)
T ₃	200	-	-	(ms)
T ₄	200	-	-	(ms)
T ₅	0	-	50	(ms)
T ₆	-	-	10	(ms)
T ₇	500	-	-	(ms)

Note)

1. Please avoid floating state of interface signal at invalid period.
2. When the interface signal is invalid, be sure to pull down the power supply for LCD VCC to 0V.
3. Lamp power must be turn on after power supply for LCD and interface signal are valid.

Product Specification

6. Electro-optical Characteristics

Electro-optical characteristics are determined after the unit has been 'ON' and stable in a dark environment at $25 \pm 2^\circ\text{C}$. The values are specified at an approximate distance 50cm from the LCD surface at a viewing angle of and equal to 0° . Measured value at the center point of LCD panel after more than 10 minutes while backlight turning on.

It is presented additional information concerning the measurement equipment and method in FIG. 1.

FIG. 3 Electro-optical Characteristic Measurement Equipment and Method

Table 8. ELECTRO-OPTICAL CHARACTERISTICS

$T_a = 25 \pm 2^\circ\text{C}$, $V_{CC} = 3.3\text{V}$, $f_v = 60\text{Hz}$

	y axis, up (φ=90°)	θu		89	-	-		
	y axis, down (φ=270°)	θd		89	-	-		
Gray scale					2.2			7

Product Specification

Note 1. Contrast Ratio(CR) is defined mathematically as :

$$\text{Contrast Ratio} = \frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$$

It is measured at center 1-point.

2. Surface luminance are determined after the unit has been 'ON' and More than 15 Minute after lighting the backlight in a dark environment at $25 \pm 2^\circ\text{C}$. Surface luminance is the luminance value at center 1-point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see the FIG. 4.

3. The Luminance Uniformity (δ_{WHITE}) is determined by measuring LN at each test position 1 through 9. The Luminance Uniformity (δ_{WHITE}) is defined as follows ;

$$\text{Panel total variation } (\delta_{\text{WHITE}}) = \frac{\text{Minimum}(L1, L2, L3, L4 \dots L9)}{\text{Maximum}(L1, L2, L3, L4 \dots L9)} \times 100\%$$

For more information see the FIG. 4.

Product Specification

Note 4. Response time is obtained by measuring the transition time of photo detector output, when input signals are applied to make center point "black" and "white". For more information, see the FIG. 5.

FIG. 5 Response Time

5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD module surface. For more information, see the FIG. 6.

FIG. 6 Viewing Angle

6. Please see the Appendix V for more information about Color Coordinator

8	Label	YUPO Paper 100x70

Product Specification**11. PRECAUTIONS**

Please pay attention to the following when you use this TFT LCD module.

11-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using specified mounting structure. (Details refer to the drawings)
- (2) You should consider the mounting structure so that uneven force(ex. Twisted stress) is not applied to the module.
And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach a transparent protective plate to the surface in order to protect the polarizer.
Transparent protective plate should have sufficient strength in order to resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.
Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics deteriorate the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzine. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.
- (10) The metal case of a module should be contacted to electrical ground of your system.

11-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :
 $V = \pm 200\text{mV}$ (Over and under shoot voltage)
- (2) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In higher temperature, it becomes lower.)
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.

Product Specification**11-3. ELECTROSTATIC DISCHARGE CONTROL**

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

11-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

11-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.
It is recommended that they be stored in the container in which they were shipped.

11-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) The protection film is attached to the bezel with a small masking tape or a double side tape.
When the protection film is peeled off, static electricity is generated between the film and polarizer.
This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.

11-7. PRECAUTIONS FOR ATTACHING THE TOUCH PANEL PROCESS

- (1) When being touch panel laminate, Stems, Scratch, Stain and etc. can be occurred and then the operation should be with care. After being attached touch panel, It is not warranty for quality problems
